

Job Posting

Job Position: CAD Designer/ Project Manager

Reports to: Manager, Canadian Design

Location: Oakville, ON

Job Summary:

The role of a **CAD Designer / Project Manager** inherently involves constant communication and interaction with Engineering, Sales, Manufacturing, and IT personnel to successfully manage projects.

You are required to maintain technical competence and acquire new job-relevant knowledge and skills through self-study and by participating in training or other learning activities offered by Konstant. It is also expected that work is performed beyond normal working hours to meet critical project milestones.

Job Responsibilities:

- **Storage System Design** – interpreting customer requests so they may be converted into design proposals that creatively optimize warehouse space utilization; this requires applying strong analytical skills in material flow and facility layout design given available company product lines.
- **CAD Drawings** – preparation of complete and accurate presentation, installation, PSR / permit, and fabrication drawings for engineering approval using AutoCAD 2014; meticulous in adhering quality drawing standards.
- **Costing & Quotation Preparation** – preparing detailed bills of materials and costing of moderate to large projects (materials, installation, freight, travel, project management); this entails coordinating with purchasing personnel to procure all necessary materials for projects.
- **Project Management** – coordinating with our manufacturing plants, customers, consultants, field managers, and other sub-contractors during the span of a project to ensure timelines are successfully met, unforeseen issues are adequately resolved, and that customer concerns are addressed to the satisfaction of all parties.
- **Presentation of Proposals** – actively participating, when requested, in the presentation of proposals to management, customers or consultants; fluent in all Windows-based applications and excellent written and verbal skills in the preparation of technical documents.
- **Special Projects** – assisting with special projects that will further develop Konstant’s design capabilities and initiatives (e.g. maintaining accurate AutoCAD blocks for company-wide use, creating new product design standards, assessing the development of design automation resources, etc.)

Job Requirements:

- Previous work experience in metal fabrication or in a material handling environment are definite assets.
- Ability to work independently on multiple projects, solving unforeseen issues as they arise, excellent written and verbal skills, and a strong work ethic are required

- High detail to ensure accuracy and compliance to organizational standards.

If you are interested in applying for this position please email your resume to careers@konstant.com, thank you.
